

# Mixed cart notification

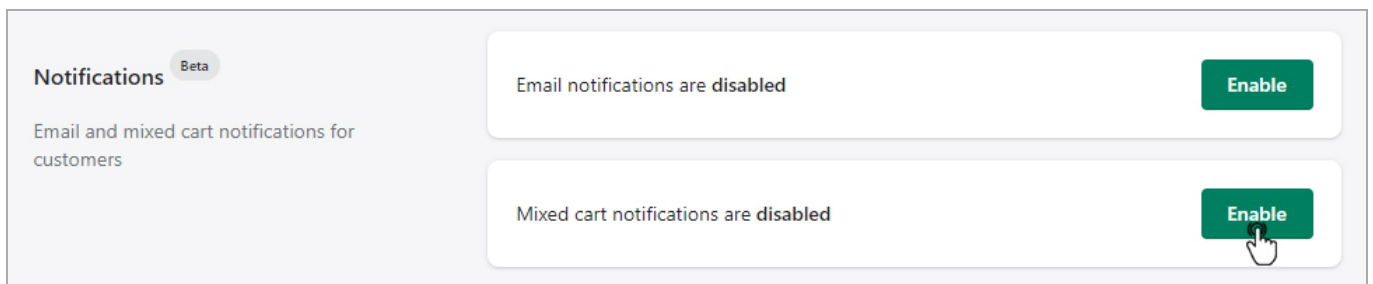

Mixed cart notification feature allows you to additionally notify your customers that their order contains both in-stock and pre-order products, which may result in a longer delivery time for their order.

:information\_source: Feature will work in the themes with cart pages only. Pop-up carts are not supported.

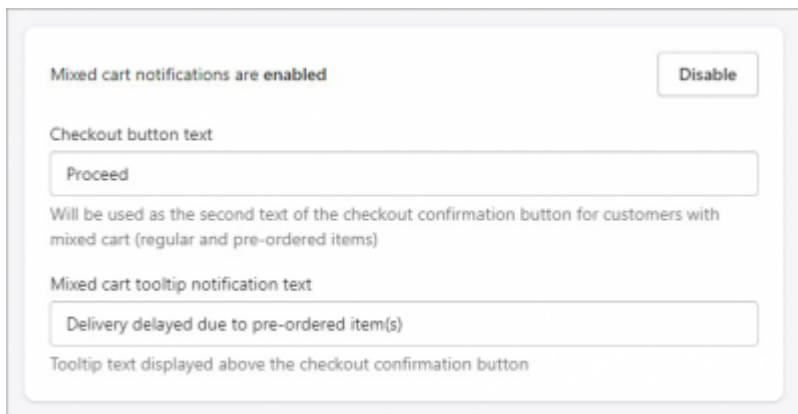

:information\_source: This is a Beta feature. We actively collect user feedback and refine the feature to make it better. In case of difficulties, please contact our support.

## Enabling mixed cart notifications

1. Open Settings, scroll down to the section "Notifications", click "Enable" mixed cart notifications

2. Edit feature text field if needed and click "Save"

## How customers will be notified

When the feature is activated, users with a mixed cart will see a tooltip when they click the checkout button at the cart page and then have to click the renamed check out button again as confirmation.
