

Manual installation

1. Add a snippet *"simple-preorder-bootstrap.liquid"* with next code:

```
<script>
  // Bootstrap for Simple Preorder app
  var SimplePreorderBootstrap = {
    "page": {{ template | json }},
    "product": {
      "id": {{ product.id | json }},
      "title": {{ product.title | json }},
      "variants": [
        {% for variant in product.variants %}
          {
            "id": {{variant.id}},
            "inventory_quantity":
'{{variant.inventory_quantity}}',
            "inventory_management":
'{{variant.inventory_management}}',
            "inventory_policy": '{{variant.inventory_policy}}'
          },
        {% endfor %}
      ]
    },
    "cart": {
      "items": [
        {% for item in cart.items %}
          {
            "variant_id": {{item.variant.id}},
            "product_id": {{item.product.id}},
            "quantity": {{item.quantity}},
            "inventory_quantity":
'{{item.variant.inventory_quantity}}',
            "inventory_management":
'{{item.variant.inventory_management}}',
            "inventory_policy":
'{{item.variant.inventory_policy}}',
            "properties": {{ item.properties | json }}
          },
        {% endfor %}
      ]
    },
    // "productSelector": 'form[action="/cart/add"] [type="submit"]',
    // "variantsSelector": 'form[action="/cart/add"] .variants-selector',
    // "checkoutSelector": 'form[action="/cart"]
[type="submit"][name="checkout"]',
    // "updateSelector": 'form[action="/cart"]
[type="submit"][name="update"]',
```

```
        // "updateInputsSelector": 'form[action="/cart"]
[name^="updates["]',
        // "debug": true,
    };
</script>
<script
src="https://http://preorder.kad.systems/scripts/NAME-OF-YOUR-SHOP.myshopify
.com.js"></script>
```

Important: At the very bottom of the snippet in the last line, replace the text "NAME-OF-YOUR-SHOP" with the address of your store from the address bar of the browser when you are in the admin area of the store (like "**simple-pre-order-demo-shop**.myshopify.com", and not, for example, "spo-demo.shop").

2. In the theme template "*product.liquid*" right before the closing tag "</head>" add the code to connect the snippet:

```
<!-- Snippet for Simple Preorder app -->
{% include 'simple-preorder-bootstrap' %}
```

3. (Not mandatory) In the snippet adjust the selectors for following buttons:

- productSelector — add to cart button
- variantsSelector — list of variants
- checkoutSelector — checkout button in cart
- updateSelector — update cart button

If this does not work, please write to support@kad.systems
